PIONEERING HUMAN DIFFERENCES AND INDIVIDUAL LIVES

Twenty Third Annual Leona E. Tyler Lecture

Kirby Deater-Deckard, PhD

Professor of Psychological and Brain Sciences,
University of Massachusetts, Amherst

“Individual Differences in Self-Regulation: Family Matters”

Self-regulation (SR) includes many components in a complex system spanning biology, cognition, emotion and behavior. SR develops from infancy through adulthood, with wide variation between people across the lifespan. These developmental and individual differences have major implications for behavior and health. SR and its variability develop in family contexts that enhance or impede healthy growth in and maintenance of SR capacities. This lecture will include an overview of collaborative research examining intergenerational transmission of SR, with emphasis on family contexts and parenting, and bio-environment transactions.

Monday October 8, 2018 • 2:30 – 4:00 P.M.
